PHENIX REBIRTH

1. About

Phenix Rebirth is a modern PC remake of the arcade shoot'em up Phoenix (1978 / 1980). It keeps the stage cycle, the saucer boss and the tight rhythm of the original, with modern graphics, the signature PHENIX mode, keyboard & gamepad, and 13 languages.

Since 1.1.0: solo, hot seat (take turns) and simultaneous coop.

Unofficial fan project. Not an official port of Amstar Electronics, Centuri or Taito.

2. Install

Requirements: Python 3.10+ and Pygame 2.5+.

Windows (simple): double-click lancer.bat — installs Pygame if needed, then launches.

Command line:

```
git clone https://github.com/Kraran/PhenixRebirth.git
cd PhenixRebirth
python -m pip install -r requirements.txt
python main.py
```

Optional Windows build: build_exe.bat (PyInstaller).

Downloads: github.com/Kraran/PhenixRebirth/releases/tag/v1.1.0 · kraran.itch.io/phenix-rebirth

3. Play modes

1 player — keyboard or gamepad from Options.

Hot seat — two players take turns. Each keeps stage, score, lives and PHENIX gauge. After a death, the game waits for a key.

Coop — two ships at once (they pass through each other). Separate scores and gauges, 5 shared lives. Player 2 is blue-tinted (gas-blue PHENIX flames).

4. Controls

Menus: confirm with Enter, Space or fire. Up: arrow, W and Z (AZERTY).

Action	1P / coop P2	Coop P1 keyboard	Gamepad
Move	Arrows	Q or A + D	Stick / D-Pad
Fire	Space / Right Ctrl	Left Ctrl	A
PHENIX	Right Shift	Left Shift	B
Pause	Esc	Esc	Start
Confirm menu	Enter / Space / fire	same	A
Back	Esc	Esc	B

Coop pad + keyboard: P1 = pad, P2 = arrows as in solo. One shot per ship on screen. In PHENIX: dual flame shots per ship.

5. Stages & scoring

Stage	Enemies	Points (Normal)
1	Dark birds	10
2	Green / khaki birds	20
3	Gargoyles	30 (body only)
4	Violet / dark-red gargoyles	40
5	Boss saucer + escorts	Core 200 · bricks 1 · decos 50

After the boss, the cycle restarts faster (stage 6 = stage 1 at +10%, and so on).

Veteran: birds +10 pts, boss 300. Novice: slower enemies, 5 lives, no high-score entry, longer PHENIX.

Bonus lives at 1,337 and 8,086 points.

Gargoyles: hitting wings is neutral; only the body kills and scores.

6. PHENIX mode

The PHENIX gauge gains +1 for each valid kill (enemy body) and loses −1 for each miss. Shots into wings, armor bricks or decorations are neutral.

From gauge level 3, activate with Shift / X or B. You become a firebird: invulnerable to shots and enemy collisions, faster, dual fire. The gauge drains as a timer. Press B / Shift again to cancel early and keep remaining gauge. Short cooldown between activations. Touching edge electricity empties the gauge. Boss bricks still kill you in PHENIX form.

7. Options

Main menu or pause: controls, autofire (On = hold to shoot again when the shot has left the screen; Off = one press = one shot), SFX / music volume, rumble 0–5, fullscreen / window / borderless, language (13 locales), FPS counter, CRT scanlines (Off / 1 / 2 / 3), ultrawide bezel (Phenix, Tesla, Blue, Flame, Off), reset high scores. Settings stored in settings.json.

High scores: top 15, 3-letter initials. Coop scores show a two-player mark. Cheats on the high-score screen (block table entry): LVL2–LVL5, LIVE, PHEN.

8. Credits

Development: Franck Fornasari (Kraran)

Assistance: Grok — xAI

Inspiration: Phoenix (1978 / 1980) — Amstar Electronics / Centuri / Taito

Music: Phenix — Eternal Dawn, Game Over, Last Coin (Credits) — created with Suno
